Elements of

RULE FILE

Rule File Elements

Package

Imports

Globals

Functions

Queries

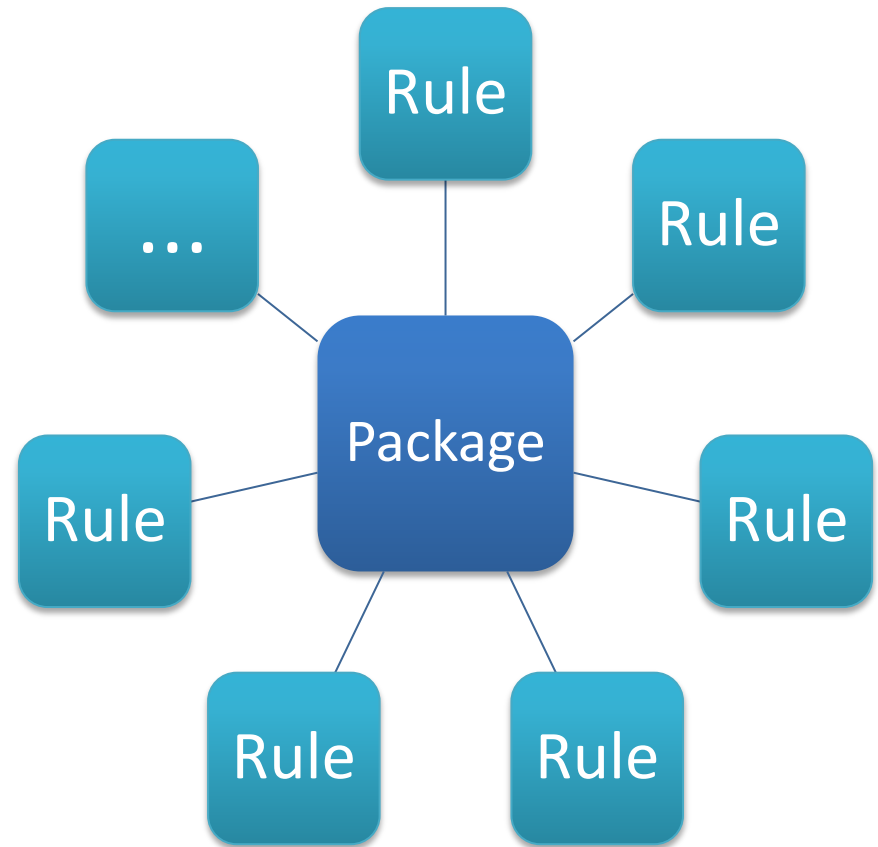

Rules

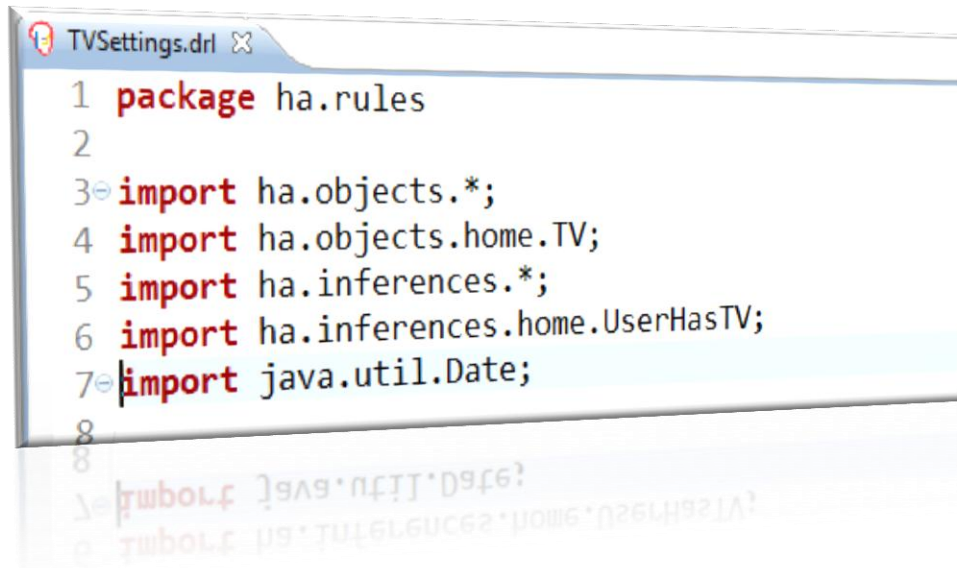

Package

- Unique
- Not related to files or folders

Import

- Like import statements in Java

```
TVSettings.drl x
1 package ha.rules
2
3 import ha.objects.*;
4 import ha.objects.home.TV;
5 import ha.inferences.*;
6 import ha.inferences.home.UserHasTV;
7 import java.util.Date;
8
```

Global

- Variables available to all of the rules
- Not inserted in the Working Memory
- The engine can't notify or track global changes
- Packages with the same global identifier
 - Must be of the same type
 - All the packages will reference the same value

Functions

- To put semantic code in the rule file
- Java code

```
function String Hello (User user) {  
    return "Hello " + user.getName() + "!";  
}
```

Query

Just RHS

```
query "Users which has more than 18 years"  
• $user : User(age >= 18)  
end
```

Result captured
by a java loop

```
QueryResults qr = ksession.getQueryResults("Users which has more than 18 years");  
System.out.println("Users which has more than 18 years:");  
for (QueryResultsRow row : qr){  
    User user = (User) row.get("$user");  
    System.out.println("* " + user.getName());  
}
```

Type Declaration

```
declare User  
  cpf : String  
  name : String  
  age : int  
end
```

Fact Type
Metadata

```
declare User  
  @author(Carol)  
  
  cpf : String @key @maxLength(11)  
  name : String  
  age : int  
end
```

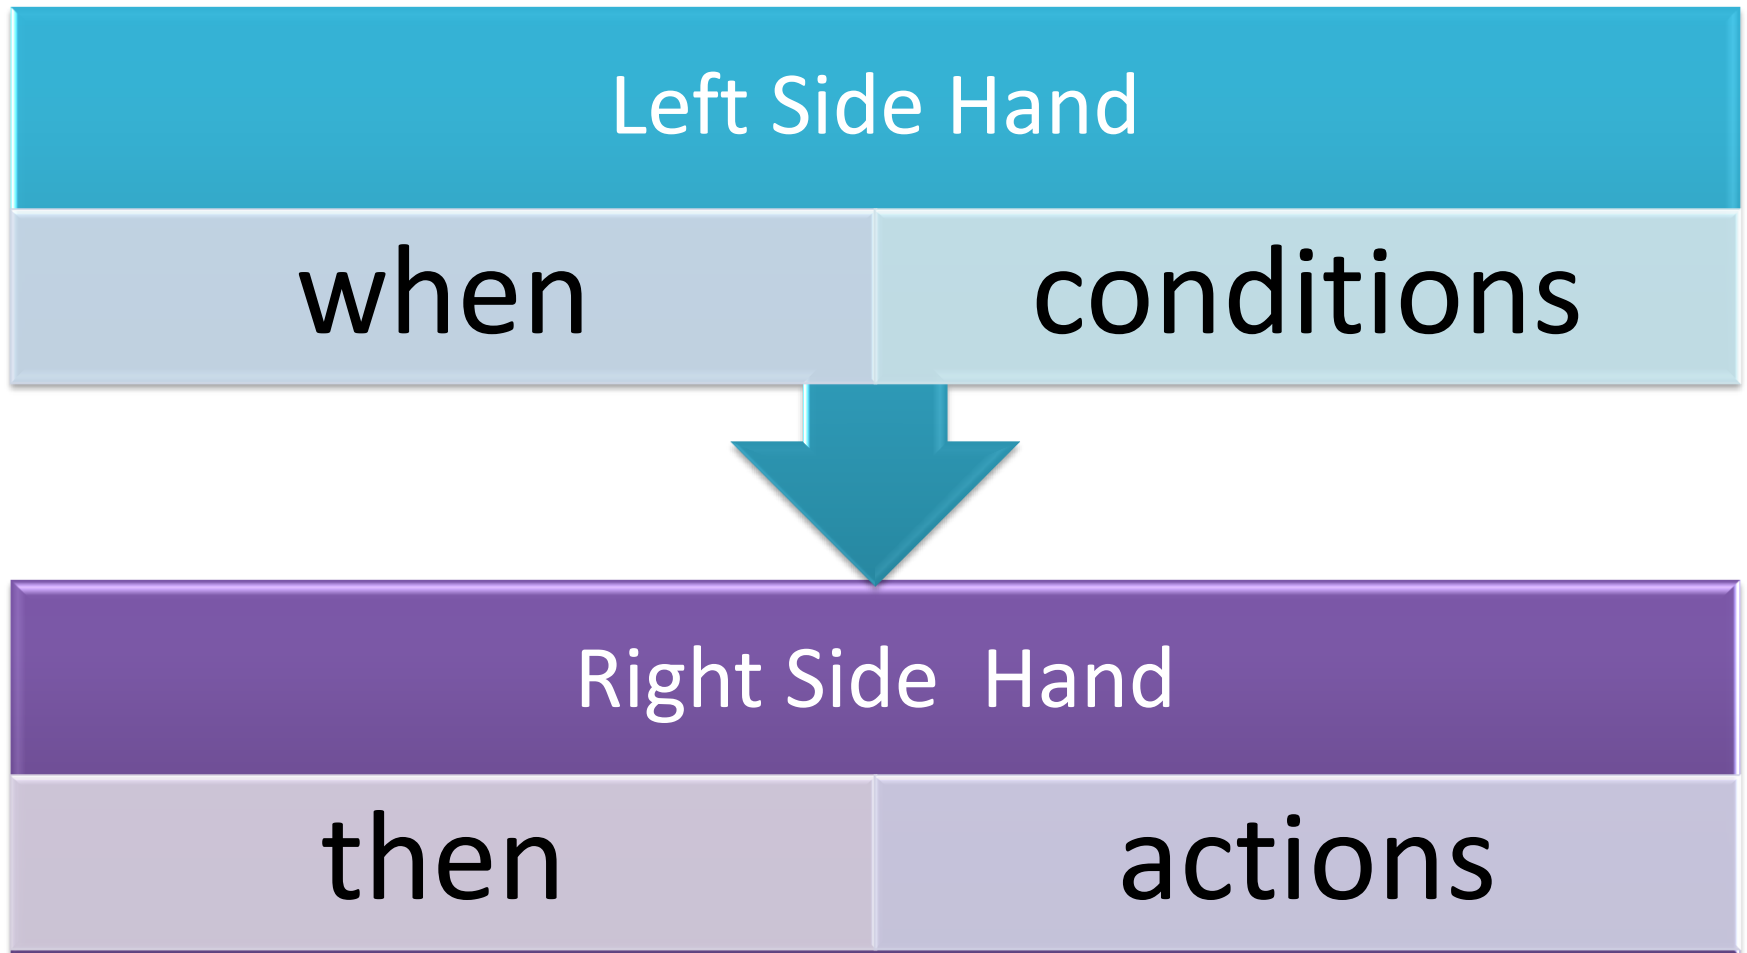

Attribute
Metadata

Conditional Elements

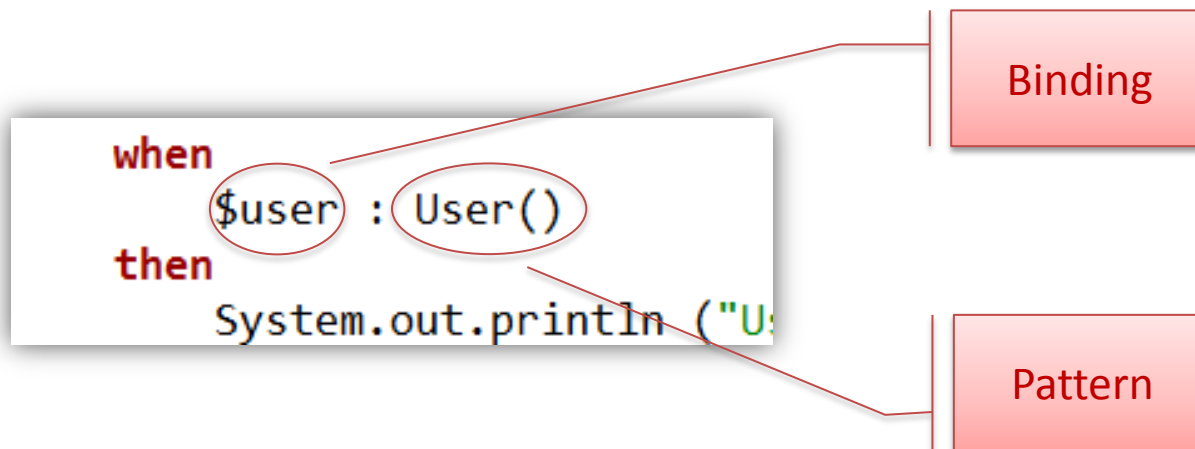

Pattern Structure

Pattern

- Most important conditional element
- Contains zero or more constraints
- Has a optional pattern binding

Constraint

Binding Variable

Access on Java Beans

```
rule "Identifying Users"
  salience 100
  when
    $user : User($name : name, age >= 18)
  then
    System.out.println ("User " + $name + " indentified.");
    System.out.println ("H/She has more than 18 years old.");
  end
```

AND separator:
comma

Java Expressions

Starting the Practice

HANDS-ON

Sample: Home Aware

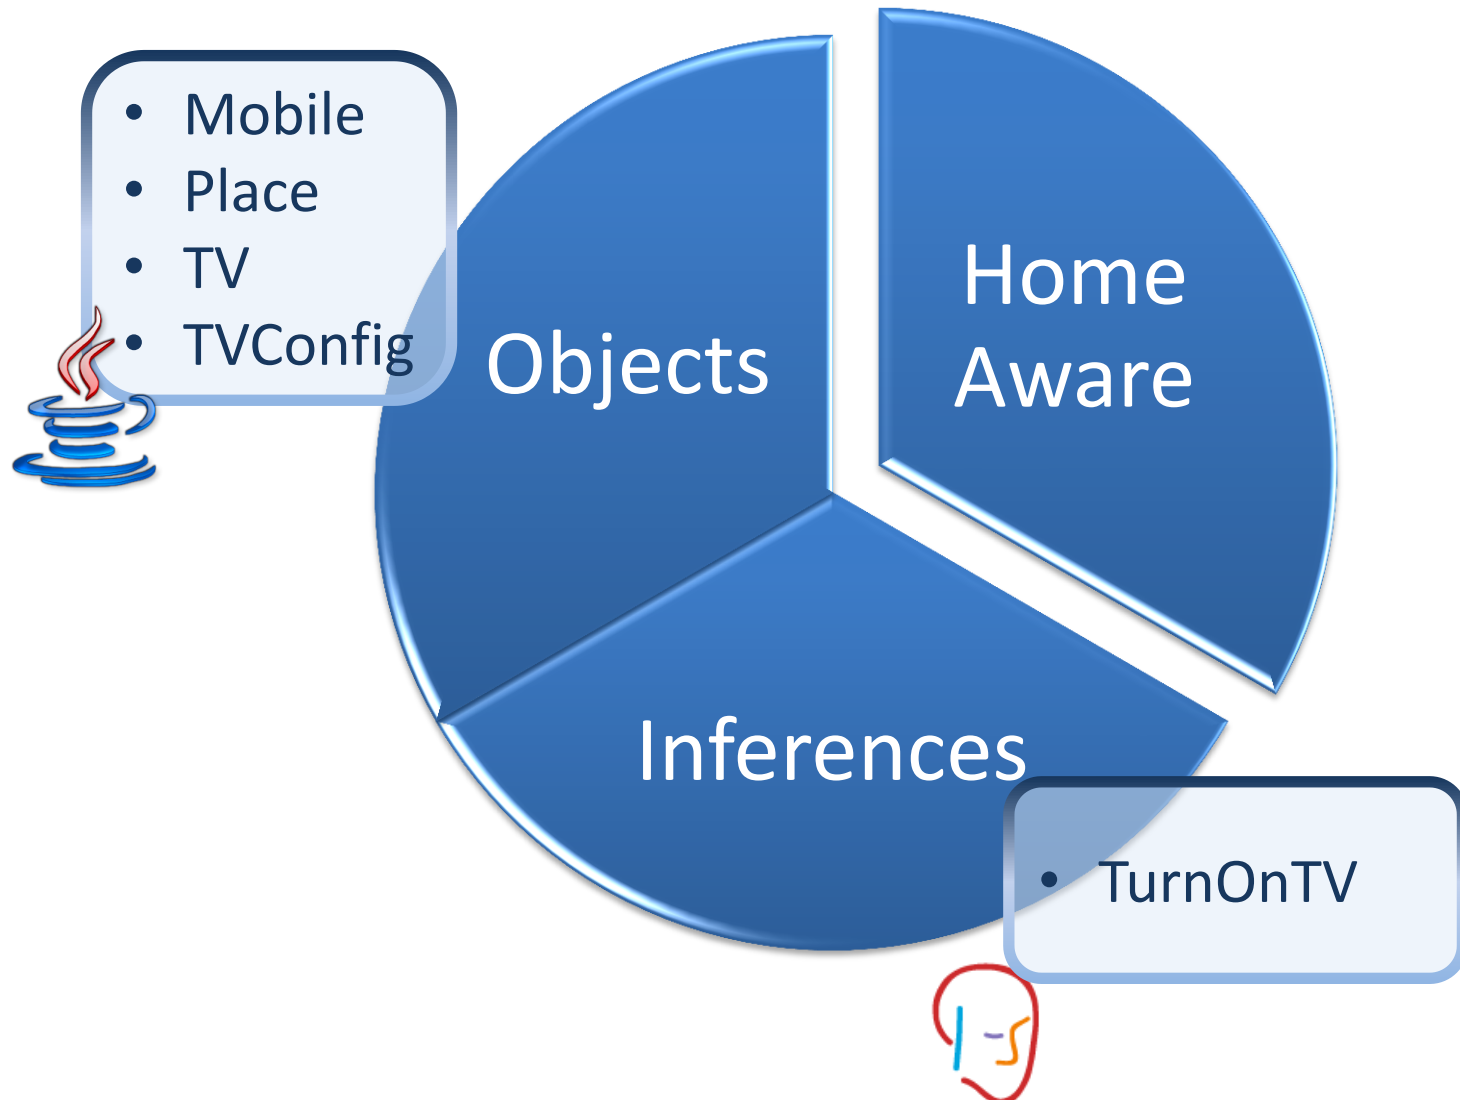

- Devices and Sensors of the House
 - TV
 - Stereo
 - Lamps
 - Air Conditioner
- GPS
 - Android Mobile

Context Aware System

Components

Package and Imports

```
package my.pack  
  
import com.sample.Place;  
import com.sample.Mobile;  
import com.sample.TV;  
import com.sample.TVConfig;  
import java.lang.Math;
```

Global Variable

```
ksession.setGlobal("PLACE", new Place("home", 12, 15));
```

```
7  
8 global com.sample.Place PLACE;  
9
```

Some rules

```
27
28 #Report Rule
29 rule "There is at least one mobile"
30     salience 100
31     when
32         exists Mobile()
33     then
34         System.out.println("There is at least one mobile.");
35     end
36
```

```
36
37 #Report Rule
38 rule "Detected Mobiles"
39     salience 90
40     when
41         $mobile : Mobile($name:name, $id:id)
42     then
43         System.out.print("Mobile detected.\tName: " + $name +
44         System.out.println("\t Position: " + $mobile.getLatitude)
45     end
46
```

Inference Rules

```
55
56 #Inference Rule
57 rule "Request to turn on TV"
58     salience 70
59     when
60         $config : TVConfig($mobileId:mobileId)
61         Mobile(id == $mobileId, CalcDistance(PLACE, this) >= 0 && <= $config.distanceToPowerOn)
62     then
63         String tvId = $config.getTvId();
64         System.out.println("Mobile " + $mobileId + " is requesting to turn on the TV " + tvId +
65             insertLogical(new TurnOnTV(tvId, $mobileId)));
66     end
67
```

CalcDistance Function

```
function double CalcDistance(Place place, Mobile mobile){
    try{
        double longDist = place.getLongitude() - mobile.getLongitude();
        double latDist = place.getLatitude() - mobile.getLatitude();
        double dis = Math.sqrt(Math.pow(longDist, 2) + Math.pow(latDist, 2));
        return dis;
    }catch (Exception e){
        return -1;
    }
}
```

```
}
}
return -1;
}catch (Exception e){
```

Active Rules

```
67
68 #Action Rule
69 rule "Turning on TV"
70     salience 60
71     when
72         $tv : TV($tvId : id, on == false)
73         exists(TurnOnTV(tvId == $tvId))
74     then
75         System.out.println("Turning on the TV " + $tvId);
76         $tv.setOn(true);
77         update($tv);
78 end
```

```
79
80 #Action Rule
81 rule "Turning off TV"
82     salience 60
83     when
84         $tv : TV($tvId : id, on == true)
85         not (exists(TurnOnTV(tvId == $tvId)))
86     then
87         System.out.println("Turning off the TV " + $tvId);
88         $tv.setOn(false);
89         update($tv);
90 end
```

Test

Result

```
Problems Properties Audit Console
<terminated> Init [Java Application] C:\Program Files\Java\jre6\bin\javaw.exe (07/11/2011 09:43:29)
There is at least one mobile.
Mobile detected.      Name: John      Id: john_mobile  Position: 12.0:30.0

ԲԵՏ

Starting the Practice

DROOLS FUSION

What is Drools Fusion?

- Module of Drools responsible for enabling event processing behavior.
- Extras:
 - Session Clock
 - Streams Support
 - Temporal Reasoning
 - Sliding Window

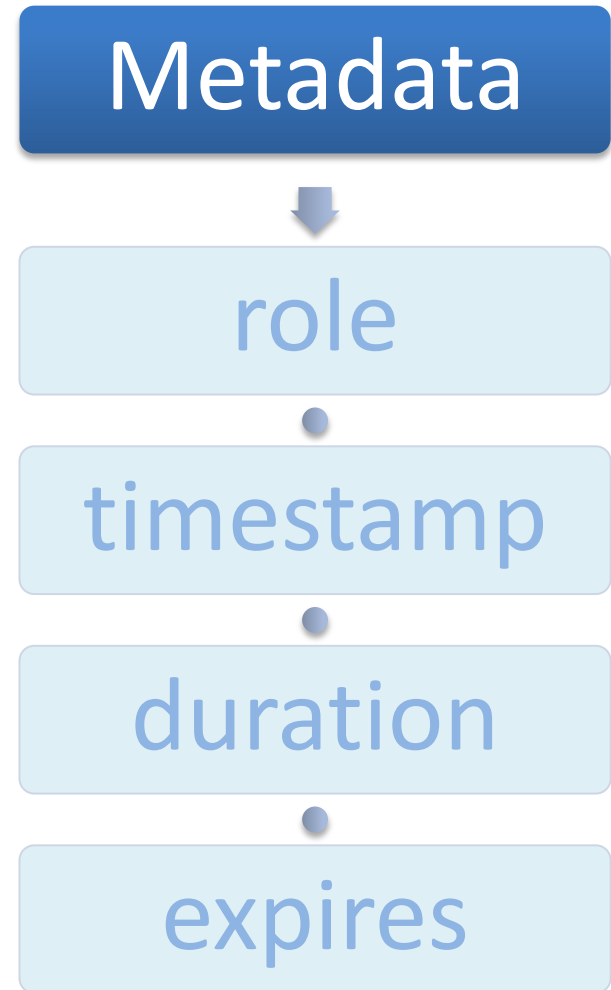

Declaration

```
declare EventName
@role (event)
end
```

```
declare UserInPlace
@role (event)

userId : String
placeId : String
dateTime : Date
end
```

Session Clock

Real Clock

- Default
- System Clock

Pseudo Clock

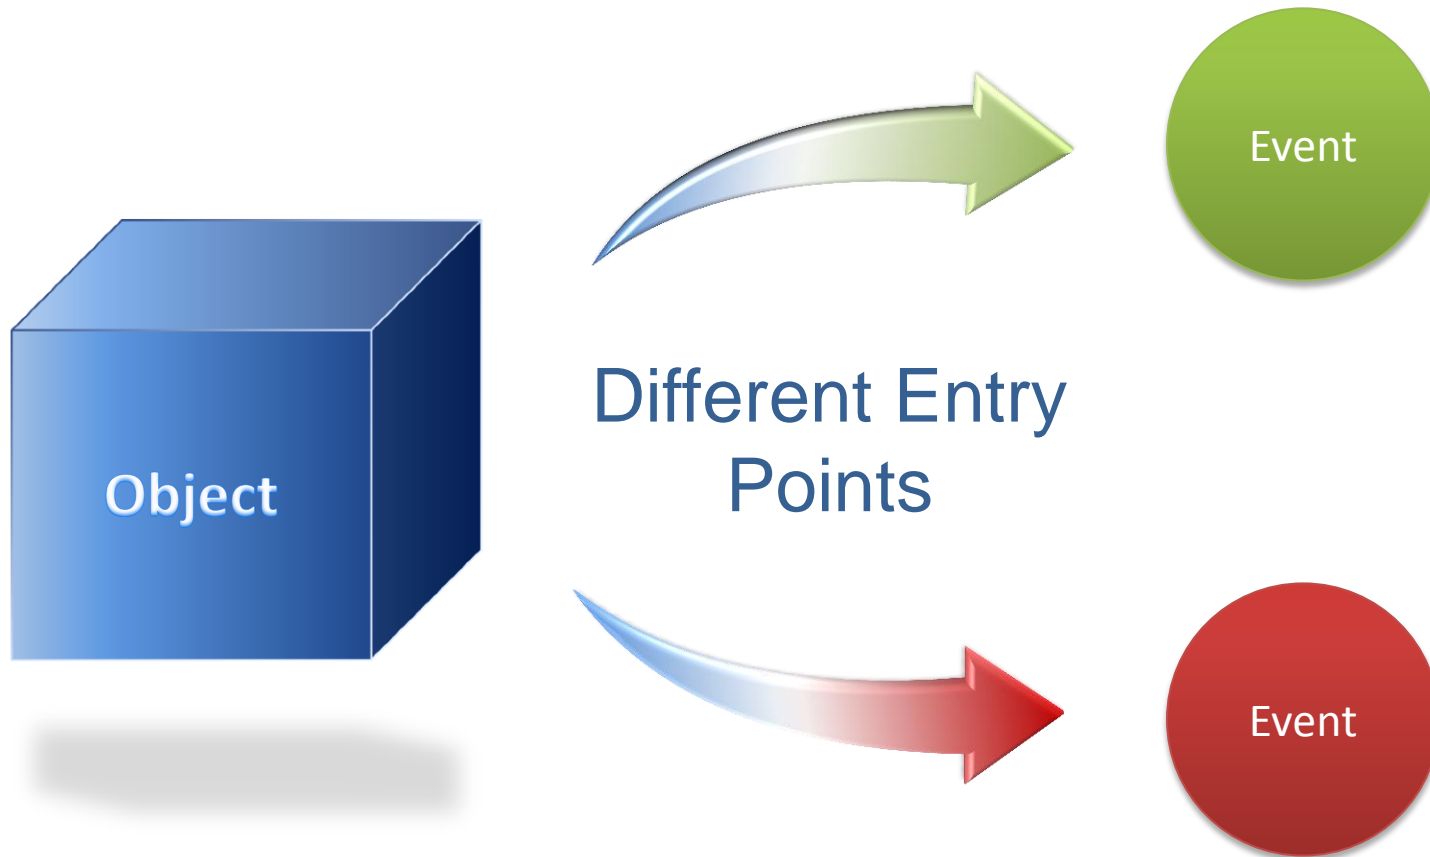

- Controlled by the application

```
SessionPseudoClock clock = ksession.getSessionClock();

ksession.insert(new User("John", "male", 17));
clock.advanceTime( 10, TimeUnit.SECONDS );
ksession.insert(new User("Mary", "female", 34));
clock.advanceTime( 30, TimeUnit.SECONDS );
ksession.insert(new User("Mike", "male", 21));

ksession.fireAllRules();
```

Event Entry Point

Event Entry Point

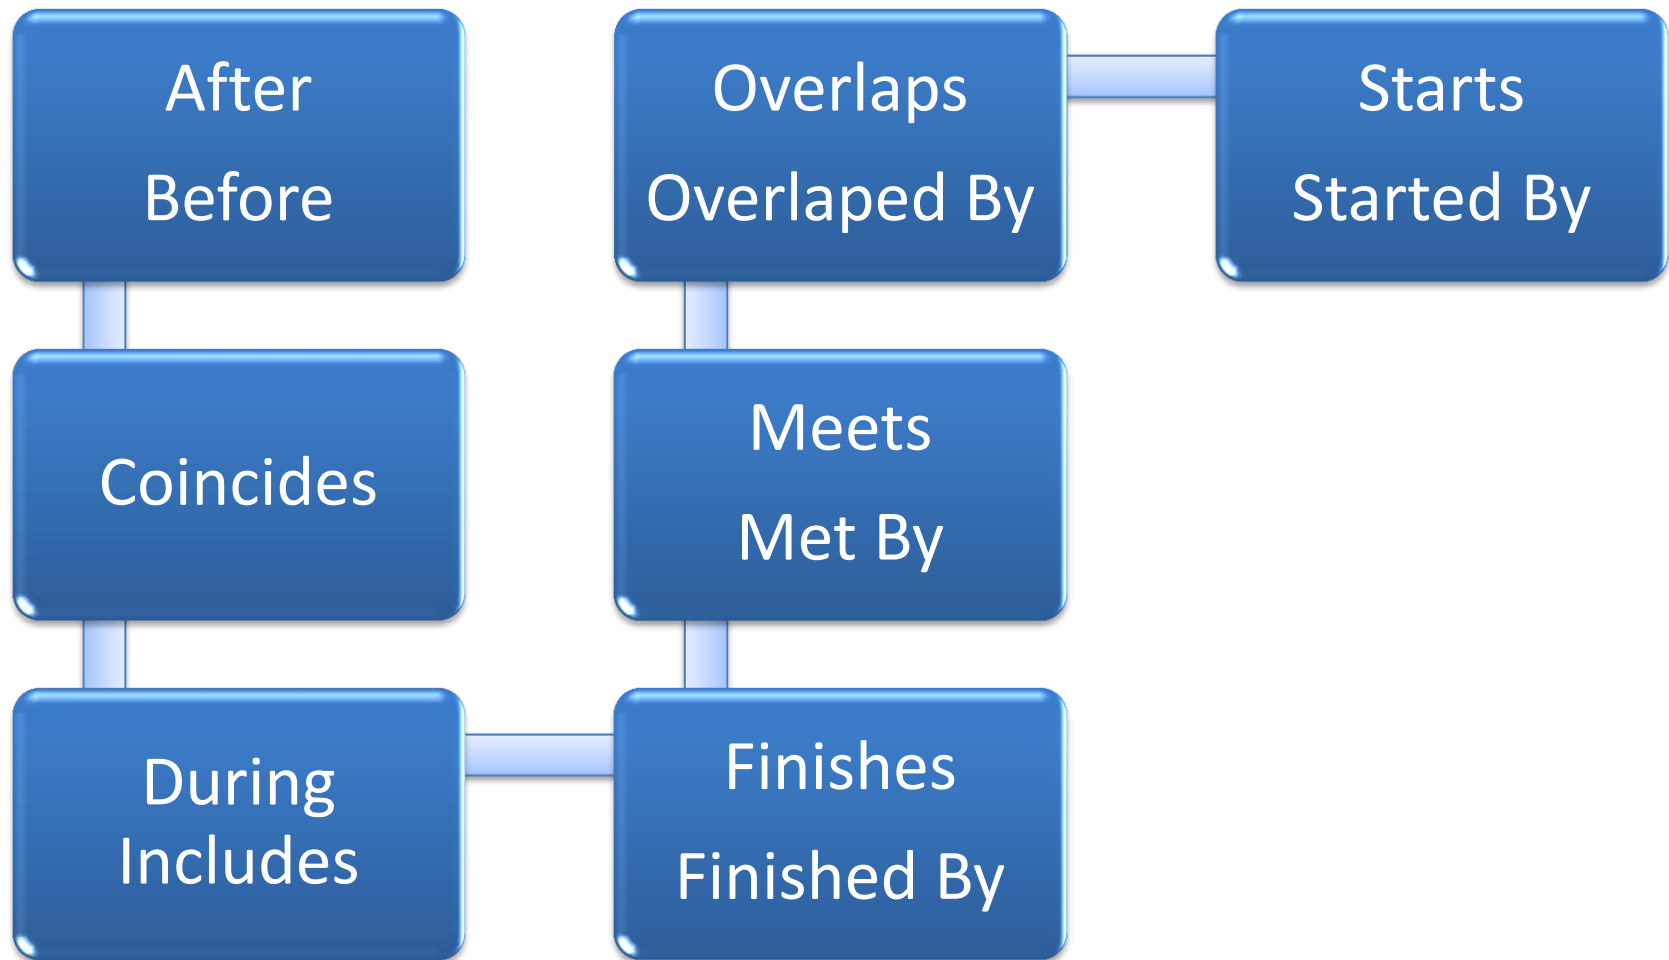

```
WorkingMemoryEntryPoint admin =  
    ksession.getWorkingMemoryEntryPoint("Administrator");  
  
admin.insert(john);  
ksession.insert(mike);  
ksession.insert(mary);
```

} User instance

```
rule "Administrator Configurations"  
when  
    $user : User () from entry-point "Administrator"  
    $command : TimeToTurnOffTVCommand (user == $user, $tv : tv)  
    UserHasTV(user == $user, tv == $tv)
```

```
Console X  
<terminated> HomeAwareFusion [Java Application] C:\Program Files\Java\jre6\bin\javaw.exe (01/10/2011 09:32:19)  
User Mary has a TV in the place Home  
User Mike has a TV in the place Home  
User John has a TV in the place Home  
Time to turn off TV changed successfully. Administrator: John  
User Mary is not a administrator and cannot change the configurations  
User Mike is not a administrator and cannot change the configurations
```

Temporal Reasoning

Temporal Reasoning

```
rule "Perimeter Adjusting"  
  when  
    $nearPlace : UserNearPlace($place : place)  
    UserInPlace(place == $place, this after [0, 2m] $nearPlace)  
  then  
    System.out.println("Your distance radius is too small.");  
    System.out.println("Would you like to increase it?");  
end
```

Sliding Window

The last X
events that
occurred

Lenght

Time

Events
Ocurring in the
last X time
units

Sliding Window

```
61
62 rule "Turn off air conditioner (ideal temperature reached)"
63   when
64     $place : Place($idealTemp : idealTemperature, airConditioner.on == true)
65     $avg : Number (doubleValue <= $idealTemp) from accumulate
66     (
67       PlaceSensor(place == $place.id, $temp : currentTemperature) over window:time( 10m ),
68       average($temp)
69     )
70   then
71     System.out.println("Turning off the air conditioner: " + $place.getId());
72     System.out.println("Temperature Average: " + $avg);
73     $place.getAirConditioner().setOff();
74     update($place);
75 end
76
```

over window:length(10),
