# List of Tables

1.1	A simple table example. . . . .	4
1.2	A table with an enumeration inside. . . . .	4

# List of Figures

1.1	An $i^*$ Strategic Dependency diagram to exemplify how to add figures. . . .	2
1.2	Same diagram from Figure 1.1, but sideways. . . . .	3

# Chapter 1

## Introduction

*If you want, you can start some or all the chapters of your thesis with a quote. Just use the `\epigraph` command from the `epigraph` package.*

---

Quote Author

This is a template for a PhD Thesis. This chapter includes examples of different elements that can be part of a thesis document. Starting with an example of the use of the `\url` command, a good source for quotes is <http://www.wikiquote.org>

### 1.1 Example section

This is an example section. Section 1.1.1 shows an example of a figure, Section 1.1.2 shows a source code listing example and Section 1.1.3 shows an example of a table. Later, in Section 1.2 (page 4), we see examples of other elements.

#### 1.1.1 Figure example

Figure 1.1 shows an  $i^*$  diagram as an example of the use of a figure in the document. Note also in this paragraph the use of the `\istar` macro so instead of “ $i^*$ ” you get “ $i^*$ ” (without having to repeat the `$$\star` command).

Then, in page 3 we also show Figure 1.2 an example of a `sidewaysfigure`, which is an environment provided by the `rotating` package that allows you to show figures in landscape in case they are too wide.

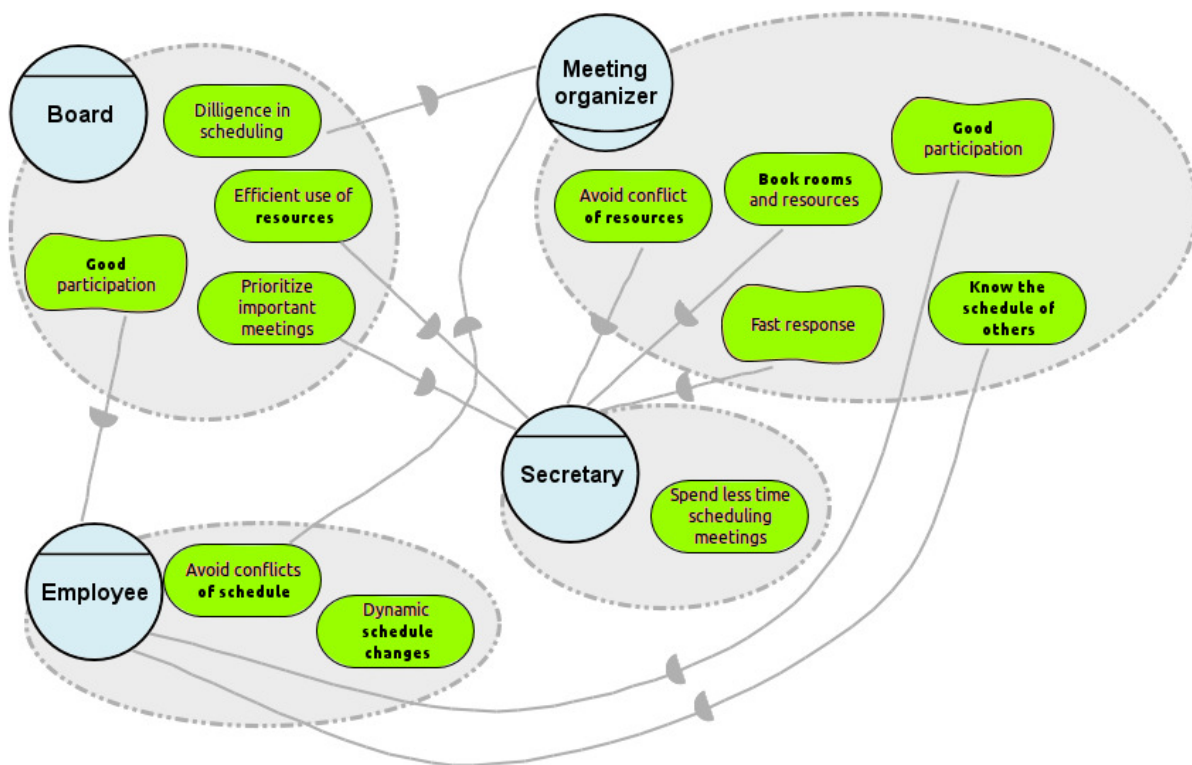

Figure 1.1: An *i\** Strategic Dependency diagram to exemplify how to add figures.

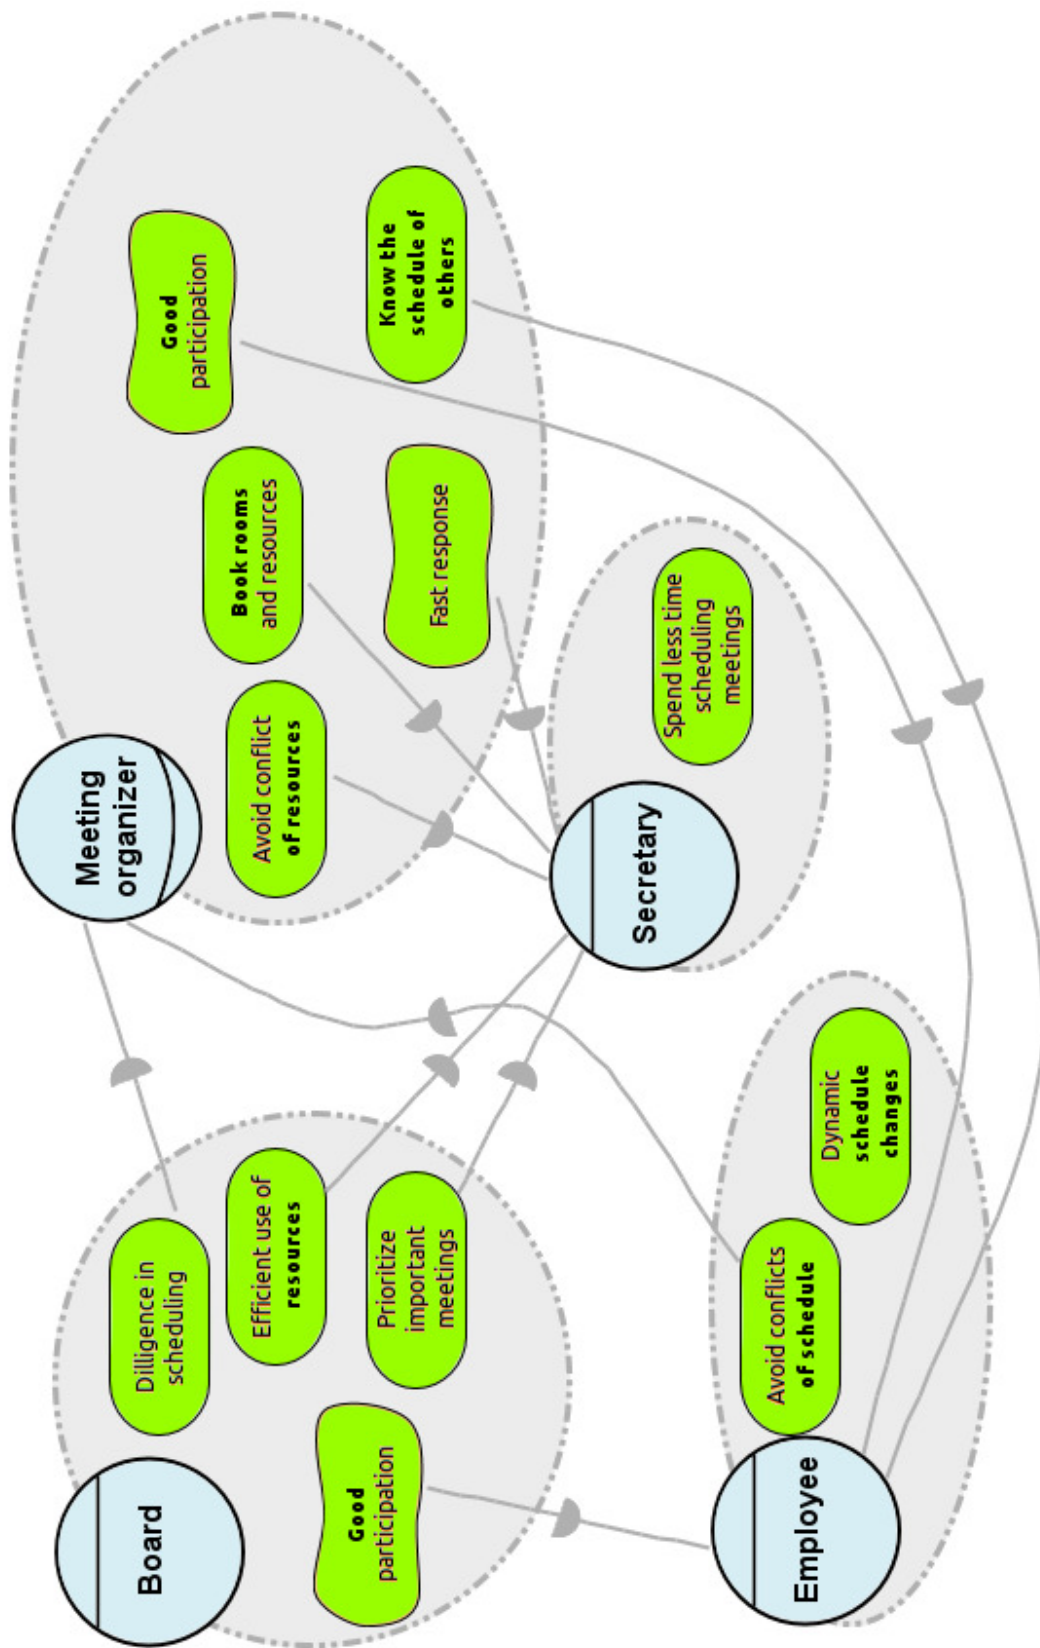

Figure 1.2: Same diagram from Figure 1.1, but sideways.

Table 1.1: A simple table example.

Num.	A column	Another column
01	(Cell contents)	(Cell contents)
02	(Cell contents)	(Cell contents)

Table 1.2: A table with an enumeration inside.

Category	List
Letters	<ol style="list-style-type: none"> <li>1. A</li> <li>2. B</li> <li>3. C</li> </ol>
Numbers	<ol style="list-style-type: none"> <li>1. One</li> <li>2. Two</li> <li>3. Three</li> </ol>

### 1.1.2 Listing example

To exemplify the use of listings (from the `listings` package), we show in Listing a *Hello, World!* program written in Java<sup>TM</sup>. Plus, there's another macro example: `\java`.

Listing 1.1: A listing example.

```

1 public class Hello {
2     public static void main(String[] args) {
3         System.out.println("Hello, world!");
4     }
5 }
```

### 1.1.3 Table example

Tables 1.1 and 1.2 show examples of tables.

## 1.2 Other examples

When referencing equations, use `\eqref`, like here: Equation (1.1).

$$x \in \{x, y, z\} \tag{1.1}$$

If you want to put a bunch of equations together, like Equations (1.2) and (1.3), use a `eqnarray` environment.

$$e = mc^2 \tag{1.2}$$

$$a^2 = b^2 + c^2 \tag{1.3}$$

To cite, the `natbib` package has many options. The `\cite` command will put the authors in the text and the year in brackets, whereas the `\citep` command will put everything in brackets. For example: Yu [2009] presents  $i^*$  and related work, but there has also been a book about it [Yu et al., 2011] if you want more complete information.

Moreover, `\citeauthor` and `\citeyear` can be used to mention just parts of the citation: Yu et al. published the book in 2011.

If you want to include the complete reference to some work in the middle of the text, you can use the `\bibentry` command, from the homonymous package. For example, here is the reference to my PhD thesis: Souza, Vitor E. S. *Requirements-based Software System Adaptation*. Phd thesis, University of Trento, 2012

As said in the main  $\text{\TeX}$  file of this template, the `\hl` command can be used to highlight text: `\hl{like this}`. However, you cannot use  $\text{\LaTeX}$  commands inside `\hl{}`.

Finally, to use Japanese/Chinese/Korean characters with the `CJK` package activated, just paste them directly into the  $\text{\LaTeX}$  source code. For instance: Zanshin — 残心 — is a Japanese term used in martial arts to represent a state of total awareness.<sup>1</sup> This paragraph also exemplifies a footnote. Notice how the `\footnote` command was placed after the period (according to the recommendation of some manual of writing style, I forget which one).

I think that's enough examples, you can learn anything else you need on your own. Happy writing!

---

<sup>1</sup>See <http://en.wikipedia.org/wiki/Zanshin>.
