Sistemas Não-Lineares

Equação de transferência
de calor

$$-\nabla \cdot (k(u)\nabla u) = f$$

Equação de convecção
e difusão

$$Cu\nabla \cdot u - \nabla^2 u = f$$

Formulação de
Diferenças
Finitas

$$F(u_1, u_2, \dots, u_N) = \begin{bmatrix} f_1(u_1, u_2, \dots, u_N) \\ \vdots \\ f_N(u_1, u_2, \dots, u_N) \end{bmatrix} = \begin{bmatrix} 0 \\ \vdots \\ 0 \end{bmatrix}$$

Método de Newton Inexato - Algoritmo

1. dados $F, J, u^0, \tau_a, \tau_r, \eta_{max}, g$ ou t
2. $r^0 = \|F(u^0)\|$
3. enquanto $\|F(u^k)\| > \tau_r r^0 + \tau_a$ faça
 - 3.1. escolher critério de parada η_k
 - 3.2. calcular $J(u^k)$
 - 3.3. resolver $J(u^k)s^k = -F(u^k)$ com toler. η_k
 - 3.4. $u^{k+1} = u^k + s^k$
 - 3.5. avaliar $F(u^k)$

Critério de Papadrakakis

$$\eta_k = \min \left\{ \eta_{\max}, \left(\frac{\|F(u^k)\|}{r_0} \right)^t \right\}$$

Critério de Kelley

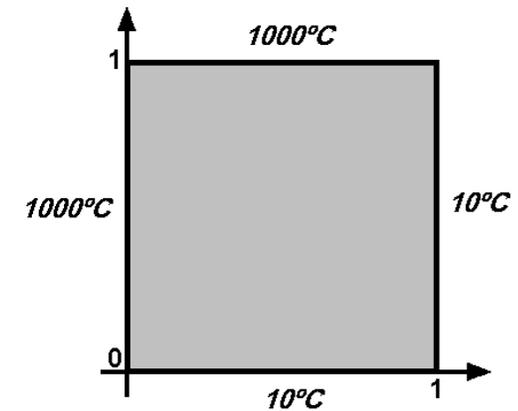

$$\eta_k = \begin{cases} \eta_{\max}, & k = 0 \\ \min\left(\eta_{\max}, \gamma \frac{\|F(u^k)\|^2}{\|F(u^{k-1})\|^2}\right), & k > 0 \text{ and } \gamma \eta_{k-1}^2 < 0.1 \\ \min\left(\eta_{\max}, \max\left(\frac{\|F(u^k)\|^2}{\|F(u^{k-1})\|^2}, \gamma \eta_{k-1}^2\right)\right), & k > 0 \text{ and } \gamma \eta_{k-1}^2 \geq 0.1 \end{cases}$$

Exemplo Numérico: transferência de calor com condutividade quadrática

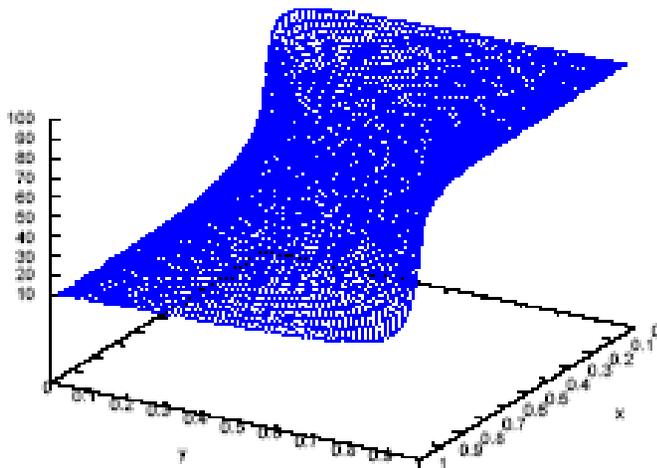

$$-\nabla(k(u) \cdot \nabla u) = 0 \quad \text{em} \quad (0,1) \times (0,1)$$

$$\text{bc: } u(x,0) = u(1,y) = 10 \quad \text{e} \quad u(x,1) = u(0,y) = 1000$$

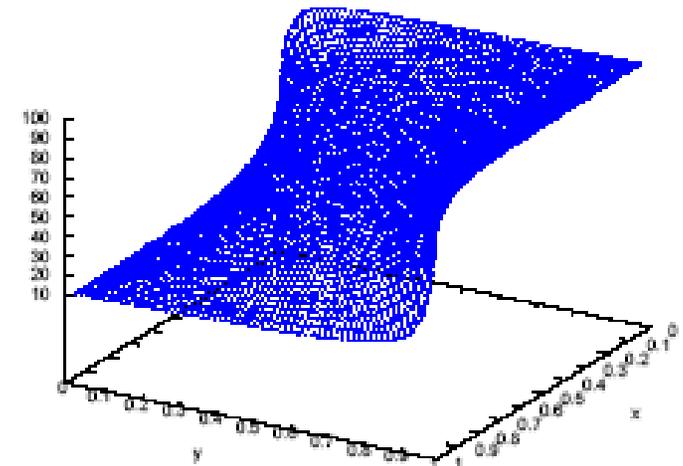

$$\text{onde: } k(u) = 0.001(1 + 0.01u + 0.0002u^2)$$
